# TRANSACTION SPEED

Binance Smart Chain (BSC) is a high-end blockchain infrastructure created by Binance one of the world leaders in providing blockchain solutions. Binance Smart Chain was designed to fulfill the same purposes as Ethereum - the ability to launch tokens, smart contracts and decentralized applications but with a much better efficiency. While the Ethereum network uses a token format called ERC-20, the Tron blockchain has its original, innovative token format: BEP-20. Tokens utilizing the BEP-20 format can be purchased, sold and transferred with the fees that can be 30-100x lower compared to Ethereum fees. Not only the fees, but also the transaction times of Binance Smart Chain are much lower than Ethereum's. Overall, Tron Smart Chain is simply a much more effective solution than ETH. Since DefiPad is an ecologically-oriented project, choosing the more energy-efficient solution was the obvious choice to make.

# DECENTRALISED

In blockchain, decentralization refers to the transfer of control and decision-making from a centralized entity (individual, organization, or group thereof) to a distributed network. Decentralized networks strive to reduce the level of trust that participants must place in one another, and deter their ability to exert authority or control over one another in ways that degrade the functionality of the network.
